

Software Engineer (Mid-Level)

Flexible location - Hybrid

Overview:

We are looking for a mid-level Software Engineer to be a key part of an ambitious, cutting edge, digital transformation and greenfield best-in-class product development in a successful, growing, and entrepreneurial business.

You will be a key part of a small tech team, helping to push the boundaries of technology, and find innovative ways to use technology to enhance our business.

You will be working alongside our Head of Technology Solutions on implementing modules and building new features for this product, ensuring they fit business requirements, perform well under load, are secure, extensible, tested, and modular.

We would love to hear from you if...

- You have a creative attitude to problem solving
- You have a burning desire to build awesomeness (most likely doing it in your spare time too)
- You fix bugs, you don't code around them
- You don't require being micromanaged, and would much rather be simply guided by an experienced technical lead
- You take joy from learning new ways of working, new methodologies, and new technologies in a controlled environment
- Doing a job more than once gives you the urge to figure out how to automate it
- Can understand abstract implementations and their concrete implementation
- You can communicate well with people who have a range of technical understanding

Job Purpose and responsibility:

- Delivering new modules and features in industry standard, secure, performant, and modular ways onto our internal, B2B, and B2C platforms
- Writing automated tests for the features you deliver (unit and feature tests)
- Collaborating with the Head of Technology Solutions to create solutions to fit business and technical leads
- Consistently improving your skill set as part of our continuous progression plans
- Investigating and resolving issues on our platforms and identifying issues with partner platforms
- Working on, and integrating with, technical and business partners, usually via RESTful APIs
- Programming OOP solutions in PHP and JavaScript (usually Laravel and Vue)
- Working alongside our Technical Implementation Manager to ensure specifications and timelines are viable and practical

What we offer in return

- 25 days annual leave
- Additional Holiday buy-in scheme
- Pension contribution
- Casual dress code
- Free parking
- Social Events Team
